General information

Bot purpose is to remind you about different events. Events can be of three types:

1. Regular
2. Irregular
3. Continuous

Regular Events occur on specific day and can be repeated in specific number of days, weeks, months, or years. A great example of a regular event is a person's birthday. It occurs on a specific day and is repeated every 1 year. Another example of a regular event is doctor's appointment. It occurs on specific days, however usually it does not have to be repeated.

Irregular events are events whose date is volatile – it changes every year. For example, in Latvia Father's Day is celebrated on the second Sunday of September.

Continuous events are like regular events. The only difference is that continuous events happen from point A to point B in time. For example, you need to take vitamins every day from the first of January to 31 of January. Continuous events may be scheduled in advance. If you know that beginning with January first, you must start taking vitamins, just schedule continuous event and when time comes you will be reminded.

Technical information

If you have any questions feel free to leave feedback in 'My settings' -> 'Leave feedback'. I will answer it as soon as possible!
